## Office Action Summary

Application No.

09/607,560

Applicant(s)

SWAMY ET AL.

Examiner

Eric B. Kiss

Art Unit

2122

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 29 June 2000.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-30 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-16, 18 and 20-30 is/are rejected.
- 7) ☒ Claim(s) 17 and 19 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 June 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

### Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 3.
- 4) ☐ Interview Summary (PTO-413) Paper No(s) \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

## **DETAILED ACTION**

1. Claims 1-30 have been examined.

### ***Claim Objections***

2. Claim 25 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Matching hierarchy comprising generating a hierarchy match list (claim 25) is already recited in independent claim 20, lines 6-7.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 3-15, 22, 23, and 29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2122

a) As per claims 3-15, 22, and 23, while applicant may be his or her own lexicographer, a term in a claim may not be given a meaning repugnant to the usual meaning of that term. See *In re Hill*, 161 F.2d 367, 73 USPQ 482 (CCPA 1947). The accepted meaning of the term “loop” in the context of the relative arts is as follows:

A collection of nodes in a flow graph such that 1) All nodes in the collection are *strongly connected*; that is, from any node in the loop to any other, there is a path of length one or more, wholly within the loop, and 2) The collection of nodes has a unique *entry*, that is, a node in the loop such that the only way to reach a node of the loop from a node outside the loop is to first go through the entry. [see pages 533-534 of Alfred V. Aho et al. “Compilers: Principles, Techniques, and Tools,” 1986, Addison-Wesley]

Applicant’s use of the term loop in claims 3-15, 22, and 23, does not appear consistent with this accepted meaning.

b) Claim 29 recites the limitation “the target node” in lines 6-9 (three occurrences). There is insufficient antecedent basis for this limitation in the claim. It is presumed by the Examiner that the preamble of the claim should recite the singular, “a target node” in lines 4-5, rather than the plural, “target nodes”. In the interest of compact prosecution, the preamble is subsequently treated as containing such a recitation for the purpose of further examination.

### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2122

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 20, 21, 23, 25, 26, 29, and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Greger Lindén, "Structured Document Transformations," 1997, University of Helsinki, Finland, Series of Publications A, Report A-1997-2 (hereinafter *Lindén*).

As per claim 1, *Lindén* discloses a method of generating code representing a mapping between a source schema and a target schema, the mapping comprising data transformations from the source schema to the target schema, the source schema comprising a source tree having a source node and the target schema comprising a target tree having a target node (see "TT-grammars," description on pages 31-34 and illustrative example on pages 34-42), the method comprising: determining source node dependencies for the target node by tracing from the target node through the mapping to the source schema (specifying production group associations and symbol associations; see pages 49-51; and page 32, second paragraph); matching hierarchy by generating a hierarchy match list for the target node (constructing the corresponding target parse tree; see "source-to-target mapper" description on page 56); and generating code according to the hierarchy match list (see subsection 4.3.2 on pages 51-52).

As per claims 20 and 25, *Lindén* discloses a method for compiling a mapping between a source schema having source nodes associated therewith, and a target schema having target nodes associated therewith (see "TT-grammars," description on pages 31-34 and illustrative example on pages 34-42), comprising: determining source node dependencies for at least one target node by tracing from the at least one target node through the mapping to the source

Art Unit: 2122

schema (specifying production group associations and symbol associations; see pages 49-51; and page 32, second paragraph); matching hierarchy by generating a hierarchy match list for the at least one target node (constructing the corresponding target parse tree; see “source-to-target mapper” description on page 56); and generating code according to the hierarchy match list (see subsection 4.3.2 on pages 51-52).

As per claims 21 and 23, *Lindén* further discloses generating a source dependency list (specifying production group associations and symbol associations; see pages 49-51; and page 32, second paragraph); and initializing node dependencies memory prior to determining source dependencies and later freeing that memory (inherent).

As per claim 26, *Lindén* further discloses matching hierarchy comprising top-down matching (see Algorithm 3.1 on pages 29-30).

As per claim 29, *Lindén* discloses a system for generating code representing a mapping between a source schema and a target schema, the mapping comprising data transformations from the source schema to the target schema, the source schema comprising a source tree having source nodes and the target schema comprising a target tree having a target node (see “TT-grammars,” description on pages 31-34 and illustrative example on pages 34-42), the system comprising: means for determining source node dependencies for the target node by tracing from the target node through the mapping to the source schema (specifying production group associations and symbol associations; see pages 49-51; and page 32, second paragraph); means for matching hierarchy by generating a hierarchy match list for the target node (constructing the corresponding target parse tree; see “source-to-target mapper” description on page 56); and

Art Unit: 2122

means for generating code according to the hierarchy match list (see subsection 4.3.2 on pages 51-52).

As per claim 30, *Lindén* discloses a computer-readable medium having computer-executable instructions for: generating code representing a mapping between a source schema and a target schema, the mapping comprising data transformations from the source schema to the target schema, the source schema comprising a source tree having a source node and the target schema comprising a target tree having a target node (see “TT-grammars,” description on pages 31-34 and illustrative example on pages 34-42); determining source node dependencies for the target node by tracing from the target node through the mapping to the source schema (specifying production group associations and symbol associations; see pages 49-51; and page 32, second paragraph); matching hierarchy by generating a hierarchy match list for the target node (constructing the corresponding target parse tree; see “source-to-target mapper” description on page 56); and generating code according to the hierarchy match list (see subsection 4.3.2 on pages 51-52).

### ***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2122

8. Claims 2 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Lindén* in view of Alfred V. Aho et al. "Compilers: Principles, Techniques, and Tools," 1986, Addison-Wesley (hereinafter *Aho et al.*).

As per claim 2, *Lindén* discloses such a method (see disclosure applied above to claim 1) but fail to expressly disclose allocating memory for a compiler node; associating the compiler node with the target node; allocating memory for compiler variable classes; and associating compiler variable classes with functoids. However, *Aho et al.* teach allocating memory for a compiler node (obtaining a block of storage); associating the compiler node with the target node (subdividing the storage to hold the generated target code); allocating memory for compiler variable classes (subdividing the storage to hold data objects); and associating compiler variable classes with functoids (keeping track of procedure activations; see "Subdivision of Run-Time Memory" on pages 396-397). Therefore, it would have been obvious to one having ordinary skill in the computer art at the time the invention was made to modify the method of *Lindén* to include memory initialization as per the teachings of *Aho et al.* One would be motivated to do so to establish a run-time environment.

As per claim 16, in addition to the disclosure and teachings applied above, *Lindén* further discloses generating a code header for a root node (pre-processing commands); generating a code trailer for the root node (post-processing commands); processing target record nodes in a preexecuteparent function, a postexecuteparent function, and an executeleaf function (processing the pre-processing and post-processing commands); and processing field nodes in the executeleaf function (processing normal spell commands; see the last paragraph on page 55 through the

Art Unit: 2122

beginning of section 4.4 on page 57). Therefore, for reasons stated above, such a claim also would have been obvious.

9. Claims 18 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Lindén* in view of Alberto Bellina, "XmlTool documentation," 21 January 2003 (hereinafter *Bellina*).

As per claims 18 and 28, *Lindén* discloses such a method (see disclosure applied to claims 1 and 28 above) but fails to expressly disclose creating an XSL style sheet representation of the mapping. However, *Bellina* teaches a tool and method of manipulating XML schemas including generating XSL style sheet representations of mappings (see "XSL generator" on page 12). Therefore, it would have been obvious to one having ordinary skill in the computer art at the time the invention was made to modify the method of *Lindén* to include generation of XSL style sheet representations as per the teachings of *Bellina*. One would be motivated to do so to be able to produce output in a standard transformation language format for use with XML files.

10. Claims 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over *Lindén*.

As per claim 27, *Lindén* discloses such a method (see disclosure applied above to claim 20) and furthermore discloses the transformation of SGML schemas (see section 2.4 on pages 20-23; and introduction to chapter 5 on page 59) but fails to expressly disclose the source schema and target schema being XML schemas. However, *Lindén* teaches the introduction of XML as a subset of SGML and suggests its future use as a replacement for SGML (see last paragraph on page 23). Therefore, it would have been obvious to one having ordinary skill in the computer art at the time the invention was made to modify the SGML schema transformation method of

Art Unit: 2122

Lindén to include XML schemas as per Lindén's own suggestion. One would be motivated to do so to implement schemas that lack the drawbacks of full SGML.

***Allowable Subject Matter***

11. Claims 17 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2122

***Conclusion***

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric B. Kiss whose telephone number is (703) 305-7737. The examiner can normally be reached on Tue. - Fri., 7:30 am - 5:00 pm. The examiner can also be reached on alternate Mondays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Morse can be reached on (703) 308-4789.

**Any response to this action should be mailed to:**

Commissioner of Patents and Trademarks  
Washington, DC 20231

**Or faxed to:**

(703) 746-7239 (for formal communications intended for entry)

**Or:**

(703) 746-7240 (for informal or draft communications, please label  
"PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, 22202, Fourth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.
